

iGET Systems Supply Chain Management Solution

Software Overview

Anham's iGET Systems software is an innovative ERP system specializing in Procurement Management, Supply Chain Management (SCM), Human Resource Management, Vehicle Management, Learning Management, and Business Intelligence solutions that ultimately facilitates inventory management, demand analysis, business processes, and boosts an organization's bottom line. iGET Systems delivers demand-based insights while managing enterprise resources and controlling costs. The end result is a solution that provides key support to business operations, the ability to keep up with global changes and trends, and the transformation of many inefficient processes into successful business opportunities.

SCM Solutions

As organizations strive to focus on core competencies and become more flexible, they have reduced their ownership of raw materials sources and distribution channels. These functions are increasingly being outsourced to other entities that can perform the activities more efficiently or more cost effectively. The effect is to increase the number of organizations involved in satisfying customer demand, while reducing management control of daily logistics operations. Less control and more supply chain partners led to the creation of a requirement for an automated supply chain management system to ensure the operation runs smoothly and maintains efficiencies. An effective supply chain management will improve trust and collaboration among supply chain partners, thus improving inventory visibility and inventory velocity.

iGET Systems offers businesses and organizations a wide range of supply chain management solutions that begin at the concept of demand and finish where the supply is met. As organizations strive to focus on core competencies and becoming more flexible, the reduction in ownership of raw material sources and distribution channels becomes ever more vital.

Business Impact

iGET Systems arms organizations with tools and capabilities to operate and compete successfully. Such results include inventory insight, demand planning and forecasting, sourcing management, production and distribution management, inbound and outbound operations, purchasing decisions, transportation strategy and implementation, milestone payments, and above all focus on customer satisfaction and demand. The end result is an efficient and productive running operation with in-depth insight and knowledge to navigate pitfalls and make successful decisions.

There are many advantages to using iGET. The bottom line and strategic impact includes (but not limited to):

1. Strategic organization optimization and management, including the number, location, and size of warehousing, distribution centers, and facilities
2. Strategic partnership management with suppliers, distributors, and customers, creating communication channels for critical information and operational improvements
3. Product life cycle management, so that new and existing products can be optimally integrated into the supply chain and capacity management

4. Information Technology infrastructure, to support supply chain operations, where-to-make and what-to-make-or-buy decisions, and benchmarking of all operations against competitors
5. Aligning overall organizational strategy with supply strategy and freeing up the needed resources to focus more on customer satisfaction and demands

Industry experts found a direct relationship from the largest networks of supplier and customer integration systems to gaining market share and increasing profitability by 1) taking advantage of supplier capabilities and 2) emphasizing a long-term supply chain perspective in customer relationships, organizations can begin to see performance improvement. And it starts with iGET Systems.

Supported Industries

iGET Systems supply chain management solutions represent our commitment to delivering network design, supply chain planning, warehouse management, and transportation management that work in your industry. These solutions are backed by development, sales, service, and support personnel with deep industry expertise and shaped by input from customers, user groups, industry analysts, industry associations, and regulatory bodies. You benefit from a lower total cost of ownership due to reduced customization and integration costs while still receiving a complete SCM solution designed specifically for you needs. You will immediately realize measurable business process improvements across your supply chain, and the assurance that comes from knowing your investment is protected.
